

100TH AVE NE Corridor Design

Improving the 100th Avenue NE Corridor with you!

It's hard to get around...

Regardless of whether you travel by car, foot or bike, residents, commuters, students and shoppers who use the 100th Avenue Northeast corridor face challenges.

Creating a safe corridor with your help!

The City began developing designs for the corridor this spring and look forward to receiving your thoughts and suggestions. Visit kirklandwa.gov/100thavedesign for upcoming opportunities.

GEOTECHNICAL WORK

Starting the week of August 9, crews working for the City of Kirkland will begin drilling to collect soil samples for analysis along 100th Avenue Northeast. This work will help the City better understand soil types when evaluating and refining the design of the project.

What to Expect:

- Drilling equipment will sound similar to a truck engine running with occasional hammering
- Street work will occur Monday - Friday between 9 a.m. - 3 p.m.
- Cones, signs, and traffic control to direct pedestrians and traffic around the drilling area
- This is the second of three phases of geotechnical work occurring this summer
